Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-10 stand rejected under 35 U.S.C. 102(b) as being clearly anticipated by Pellegrino et al.

Pellegrino et al. teaches a grid for absorbing x-rays having a plurality of layers having a plurality of wire elements (Fig. 1 Item 31) as recited in claim 1. The wire elements are polygonal in cross-section as recited in claim 4, and comprise an x-ray opaque portion which is a metal portion as recited in claim 8 (Col. 5 Lines 37-42), and an x-ray transparent portion for binding the layers together comprising epoxy (Col. 6 Lines 7-23) as recited in claim 9. The grid further comprises layers, which are focused on a focal point (Col. 5 Lines 1-11 and Item 52) as recited in claim 7, said layers being oriented in one predominant direction (Fig. 1) and are substantially coplanar as recited in claim 6. Each layer (21-29) in Fig. 1 has wire elements which run parallel to one another as recited in claim 2 and which run at right angles to others in different layers as recited in claim 3. Pellegrino et al. also teaches that the thickness of the laminating agent and layer thickness vary, producing layers having different distances between them as recited in claim 5. Finally, x-rays which are transmitted through the grid are detected on a sheet of x-ray film (51).

Response to Arguments

Applicant's arguments filed June 30, 2003 have been fully considered but they are not persuasive.

Applicant argues that the art of Pellegrino et al. is not applicable because the wire layers of Pellegrino et al. are not separate from one another. Examiner disagrees. The x-ray absorbing grid of Pellegrino et al. comprises a plurality of wire element layers which are indeed separate from one another and held fixedly so by a layer of epoxy (37). This polymer insulates and separates the plurality of layers.

The Applicant's invention is taught by Pellegrino et al. and the rejection is made Final.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
